(763) 402-4165 | Joe88cornell@yahoo.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

SUMMARY

Security professional with hands on experience in SIEM engineering, incident response and security automation. Experience developing and maintaining Splunk and CrowdStrike NG-SIEM detections, dashboards, alerts and SOAR automation using Python, REST, and GraphQL APIs.

CERTIFICATIONS

CompTIA CySA+ • CompTIA Security+ • Splunk Core Certified User • PJPT • HTB CWES • OSCP (10/26)

EDUCATION

Bachelor of Science in Cybersecurity
Associate of Science in Cybersecurity

University of Wisconsin Stout
Anoka Ramsey Community College

PROJECTS

Detection Engineering GitHub Repository

- Developed and documented SIEM detections and investigation workflows focused on endpoint telemetry analysis, persistence detection, browser extension monitoring, and threat hunting operations.
- Created operational detection documentation including tuning guidance, false positive analysis, investigation methodology, and telemetry validation workflows.

Web Application Penetration Testing Playbook & Methodology

- Developed a structured web application penetration testing knowledge base covering enumeration, authentication testing, API assessment, vulnerability discovery, exploitation workflows, and post-exploitation methodology.
- Created operational playbooks for common web vulnerabilities including SQL injection, XSS, SSTI, XXE, SSRF, file upload abuse, LFI/RFI, and command injection aligned to OWASP Top 10 concepts.

EXPERIENCE

Binary Defense - Remote Security Analyst

Minneapolis-Saint Paul Metro, MN
December 2025 – Present

- Assigned as a dedicated Security Analyst supporting a Fortune 1000 client, providing incident response, Splunk SIEM operations, detection tuning, and security engineering support within a managed security services environment.
- Develop and maintain Python based SOAR automations leveraging REST APIs, GraphQL APIs, and Splunk data sources to automate security investigations, alert enrichment, remediation workflows, and operational reporting.
- Designed and implemented security automation that queries Splunk activity logs and enterprise APIs to identify inactive users, automatically remove stale USB device exclusions after defined inactivity thresholds, and generate automated audit reports, eliminating daily manual review processes.

Menards – On Site Information Security Analyst

Eau Claire, WI
October 2023 – December 2025

- Supported enterprise SIEM operations across both Splunk Enterprise and CrowdStrike NG-SIEM during the organization's migration, developing dashboards, alerts, reports, and detection content while maintaining visibility across environments throughout the transition.
- Created Splunk macros, field extractions, and regular expression (regex) parsing to normalize OSSEC/Wazuh security telemetry, improving search efficiency, dashboard accuracy, and detection reliability while supporting the enterprise migration to CrowdStrike NG-SIEM.
- Developed SIEM dashboards, scheduled reports, and detection content within Splunk and CrowdStrike NG-SIEM to improve security monitoring, investigation, and operational visibility.
- Engineered an internal Breach and Attack Simulation (BAS) framework in Python and PowerShell that validated SIEM detections and improved alert fidelity.
- Led quarterly threat intelligence initiatives aligned with the MITRE ATT&CK framework, closing detection gaps and enhancing resilience against advanced persistent threats (APTs) through continuous control testing.
- Streamlined PCI compliance by documenting and designing repeatable evidence-collection processes and tightening audit readiness, reducing time spent on annual assessments.

TECHNICAL SKILLS

Splunk Enterprise • SPL • CrowdStrike NG-SIEM • LogScale • Detection Engineering • SIEM Engineering • CQL • LQL • MITRE ATT&CK • Threat Hunting • SOC • Incident Response • EDR • Python • PowerShell • REST APIs • GraphQL APIs • SOAR Automation
